Videoconferencing across the Curriculum

Available January 2008

There have been major developments in the educational use of videoconferencing during the last few years and more schools than ever before are using it to support learning and teaching.

This new book by **Tim Arnold** and **Steve Cayley**, co-authors of the 2004 publication *Videoconferencing in the Classroom*, is a resource book for teachers – from those thinking about getting started with videoconferencing to those who are already using it regularly in their classrooms.

Videoconferencing across the Curriculum includes advice about equipment and how to use it in the classroom for those new to the technology, and suggestions for 'starter' videoconferences. It also includes a wealth of suggestions and ideas for using videoconferencing to support learning and teaching across the curriculum in primary and secondary schools.

There's advice, too, on: • Using videoconferencing to support inclusion • Using videoconferencing to support continuing and professional development • Videconference content providers • National videoconferencing services, including those provided by the Regional Broadband Consortia (RBCs), the JANET Videoconferencing Service (JVCS) and JANET Collaborate • Setting up links with schools in other countries • Ethical and e-safety guidelines.

If you're using videoconferencing in your school – or are considering it – this is an essential resource!
